## 1. Introduction

In 2019 Canon started the “DRONE” project (Developing Regions one ERP) which has the objective to bring all regions of DRBG on one common ERP platform.

The common ERP platform that is chosen is called Orion, Orion is an ERP system that is developed and will be implemented by Azentio.

The objective of this document is to explain to you the processes that have been defined for Business Operations in the “DRONE” project for Canon CEE and to give the explanation of the modules and screens in Orion that are necessary to fulfill your business tasks in this new environment.

This document is prepared based on the discussions with DRONE Domain BPOs and existing As is Process study in CCEE.

### 1.1. Purpose

The purpose of this document is to describe the solution design of various Business Operation Processes, Screens, Screen functions, Transactions, Reports, Integration points. This Solution design will be followed for the setup, development and configuration of all the processes and functional points agreed with the Domain BPOs.

### 1.2. Scope

The scope of this document is to cover the Solution design for the business Operation flows followed in CCEE as is and also will have to follow the DRONE template standards. The detailed gap analysis list is found in the section 1.4 References. Finance related process and flows will be described in different document.

### 1.3. Definitions, Acronyms, and Abbreviations

#### Abbreviations

| Abbreviation | Description                   |
|--------------|-------------------------------|
| O2C          | Order to Cash                 |
| P2P          | Purchase to Pay               |
| B2B          | Business to Business          |
| B2C          | Business to Customer          |
| DBPO         | Domain Business Process Owner |
| PO           | Purchase Order                |
| SO           | Sales Order                   |
| GRN          | Goods receipt Note            |

| Term       | Definition                                                           |
|------------|----------------------------------------------------------------------|
| Web Portal | Ordering screen used by Customers/Partners to place the sales Order. |
| POYO       |                                                                      |

| 2 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |        |         |

## 1.5. Assumptions

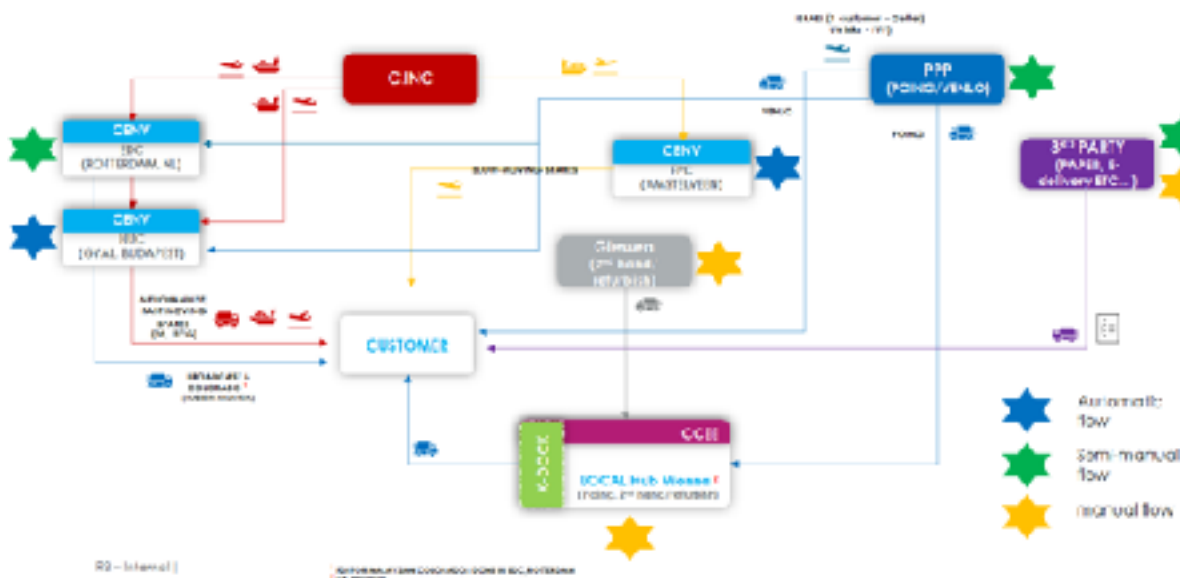

Current process for the Order management followed in CCEE should not be changed except the product upgrade to higher version.

## 2. Organization set up

Canon CEE with its Headquarter in Vienna is the regional sales organization of Canon Europe (RSO) for Albania, Bosnia and Herzegovina, Bulgaria, Croatia, Greece, Kosovo, North Macedonia, Montenegro, Romania, Serbia, Slovenia, Malta, Cyprus, Israel, Ukraine, Moldova, Georgia, Armenia, Azerbaijan, Kazakhstan, Kyrgyzstan, Uzbekistan, Tajikistan and Turkmenistan

### 2.1. Bus Ops Logistics Flow

### 3. Process flow description

CCEE follows the dropshipment process, the orders can be created in Portal or Direct in Orion. Purchase Order will be created referring the Sales Order and GRN will be created referring the purchase Order. There is no Supplier bill for CENV invoice since GRN is directly created from PO.

**Gap #30 For manual and Semi Automatic flow, Delivery note print will be printed in the invoice transaction. Please refer the below screenshot for Delivery Note format.**

**Delivery Note can be previewed and can be sent after confirmation. Remarks field in Debit Note will have 156 charaters to add additional info like weight, measurements,..etc.**

## 3.1. Orders Initiated thru Web Portal – Automatic Flow

### P2P and O2C INDIRECT BUSINESS

**Automatic flow is used when CCEE ,**

Customers/Partners Create Orders in Web portal (**Refer the portal doc for more details**). When orders are initiated in Web portal, normally orders are separated by the product types entered in Web portal.

However, when there are multiple product types in single order (e.g B2B and licences are ordered together), then system splits the orders based on product types and creates separate orders in Orion

In both cases, based on the quantities delivered, there could be multiple GRN and corresponding invoices against one Web Portal order.

### Sales Order(Gap #22, 67)

- Web orders are placed by customers through Web portal.
- Based on the product category (B2C, B2B, SPF, SPS), separate sale orders for each category is created in Orion. Web order and Sale order creation based on product category in Orion will be handled by web portal setup to ensuring B2B / B2C / Spares are not ordered in one order.
- 'Sales order type' in Orion Sales order will store the product category based on which the order would be generated. For auto generated orders, Product category in Item master will be used to determine the Sales type.
- Sales Order types would be
  - 3PP - 3rd party product

- B2B - Merchandise - B2B (Previously BIG)
  - B2C - Merchandise - B2C (Previously CIG)
  - BRC – Broadcasting
  - DRF – Drums Fast Mover
  - DRS – Drums Slow movers
  - PPR - Paper
  - SPF - Spares Fast mover
  - SPS - Spares Slow mover
  - SWC - Software / Licence Canon
  - SWN - Software /Licence Non Canon
  - USP - Used Products
  - OTH - Others
- OTH – Warranty items(Non stocks) are created with type OTH and the price for the items are stored in Orion based on upload from web portal. Price will be picked from Portal integrated to Orion while placing the Order in Portal.
  - The prices sent to Orion are Net prices, and all discount calculations are handled in Portal. Explained in [section 5.5](#)
  - Payment term will be set in Orion.
  - Shipment mode will be defaulted in Sales Order based on the Shipment mode (Road/Air/Sea etc) set in Portal.
  - Incoterm will be defaulted based on the incoterm matrix table in the below sharepoint location  
[https://canoneuropenv.sharepoint.com/:x:/r/teams/EMEA-DRONE/\\_layouts/15/Doc.aspx?sourcedoc=%7B703FFFC4-CFD2-439F-AF84-B0100DD16313%7D&file=CCEE-Matrix-shipmentmodes-leadtimes.xlsx&action=default&mobileredirect=true](https://canoneuropenv.sharepoint.com/:x:/r/teams/EMEA-DRONE/_layouts/15/Doc.aspx?sourcedoc=%7B703FFFC4-CFD2-439F-AF84-B0100DD16313%7D&file=CCEE-Matrix-shipmentmodes-leadtimes.xlsx&action=default&mobileredirect=true)
  - For the urgent deliveries Partner will select the Urgent delivery flag in Portal. An expense will be added to the sales Orders based on the predefined conditions (Weight/ Volume/ Destination/ etc...). All above processes are related to web portal Integration. Please refer [Section 5.4](#) for Sales Order Split logic from Portal
  - Output VAT would be calculated from One Source and inserted for each SO. Will be detailed in [Finance Solution design document \(Dec Ref\)](#)
  - Once Sales orders are created in Orion, Sales orders will get approved automatically.
  - No credit limit check is done during Order approval.
  - There will be no amendment after approval of the order.
  - In Sales Order Key Information screen the gross value and Net value display should be followed as per DRONE template. Below is the screenshot (Gap #67)

| Current                                                                           | CCEE | To                                                                                 | Be | DRONE |
|-----------------------------------------------------------------------------------|------|------------------------------------------------------------------------------------|----|-------|
|  |      |  |    |       |
|  |      |  |    |       |

### 3.1.1.Purchase Order (Gap #17, 23)

- Once Sale orders are approved, one Purchase order against each Sale order would be created automatically based on product supplier combination.
- Incoterm and Incoterm year will be defaulted from the Supplier Master.
- Purchase orders will have reference details of Sales order:
- Supplier selection is done via a matrix based on combination of product type and customer location (EU /Non EU / AT). Please refer the [section 5.9](#).
- If supplier details for a combination of Sales type and location is not available, then Auto PO will not get generated. Finance will then finalize the setup and PO will get created automatically.
- All supplier related information like Supplier address, Shipment mode, Payment terms, Currency etc will be defaulted from Supplier master
- Purchase price will be defaulted to Zero for POs to CENV. Purchase price will be confirmed by the CENV invoice.
- Once a Purchase order is generated, it is automatically approved.
- There will be no amendment after final approval of the order is done.
- Purchase order will be transmitted for further process. Oracle/Pepls items to be automatically interfaced to Oracle(EX100) / Pepls(EX420).
- EX100 will be generated only when the product BU type is B2B/B2C/SWC/SPF/DRF. EX420 will be generated only when the product BU type is SPS/DRS.
- Promise to Deliver (PTD) dates will be updated in PO based on POYO process ([Refer Section 5.9](#)) and the same information will be updated in SO. Webportal will pick the information from Orion SO.
- In PO document Print, Incoterm and Incoterm Year will be captured from the PO transaction for Tangible Products. For Intangible products Incoterm will be displayed as "E-Delivery".

### 3.1.2.Goods Receipt / Goods Receipt Costing (Gap #16,17, 19, 170 25, 26)

- Based on shipment confirmation transmission from Oracle system (interface file EX210), GRN to be created automatically.
- GRN will be created referring to Purchase orders created out of Sales Order.
- Purchase VAT will be automatically calculated from Onesource integration. Details in Finance Solution document (Ref."Will be added later.)
- GRN creation process will be done based on EX210 for the items, and to the extent of quantity transmitted.

- If the item code in EX210 is a secondary item, then the GRN will be created for Secondary item which will be updated in PO and also in SO. Updates on all relevant reports which have the content any information from Purchase Order & Sales Order, Web Portal Open order report will have to be also updated with old and new item code. Reports in Orion are Purchase Order report, Pending Purchase Order report, Closed Purchase Order report, Sales Order report, E2E Report and WebPortal Open order report in Web Portal. Purchase Order report from Orion below

|                    |            |            |            |            |

**PURCHASE ORDER**

My Reports

- Purchase Order
- Purchase Order Pending for GRN
- Closed Purchase Order

Sales Order report from Orion below

**Sales Order**

Created By: 01

Transaction From: 01

Document Number From: 0

Document Date From: 01/01/2021

Customer From: 01

Delivery Date From: 01/01/2021

Sales Location From: 01

Start Date: 01

Status: N/A

**Sales Order**

My Reports

- Sales Order
- Closed Sales Order Detail
- Sales Order Pending for Delivery
- Sales Order Pending for Invoice

- Item substitution and POYO information Process is explained in the section 5.9
- Once GRN is generated, approval, posting and confirmation will happen automatically.

### 3.1.3.Sales Invoice (Gap #27)

- Invoice against each Sales order will be created based on GRN confirmation.
- Invoice will be created for the item quantities that are confirmed in GRN in this case there is possibility of multiple invoices for same Sales Order.
- Payment due dates are based on Invoice dates and payment terms defined in customer master
- Invoices will get generated and will get confirmed and posted automatically.
- Automatic email will be sent to customers on invoice generation for all email addresses having 'Email offers' selected in Contacts of Customer master (Refer section 5.5).
- Invoice Distribution Logic is applied:
  - Defined EU partners: to receive the Original Invoice via PDF (e-mail sent to defined mail-address in customer master) after invoice creation
  - Defined EU partners & NON EU partners: to receive Original CCEE Invoice with Shipment & copy of CCEE Invoice via PDF (defined e-mail address in customer master) after invoice creation). Original Invoice to be sent via e-mail (PDF) to Syncreon WH Budapest where the Original Invoice is printed, signed & stamped and attached to the Transport documents.
  - Emails will be sent based on the table mentioned in the below document (please notice this is a dynamic set-up and contacts or needs of invoice sending can change whenever needed). Mailing Setup screen is available in Orion where Bus Ops Direct role users will have access to edit/add the new details.

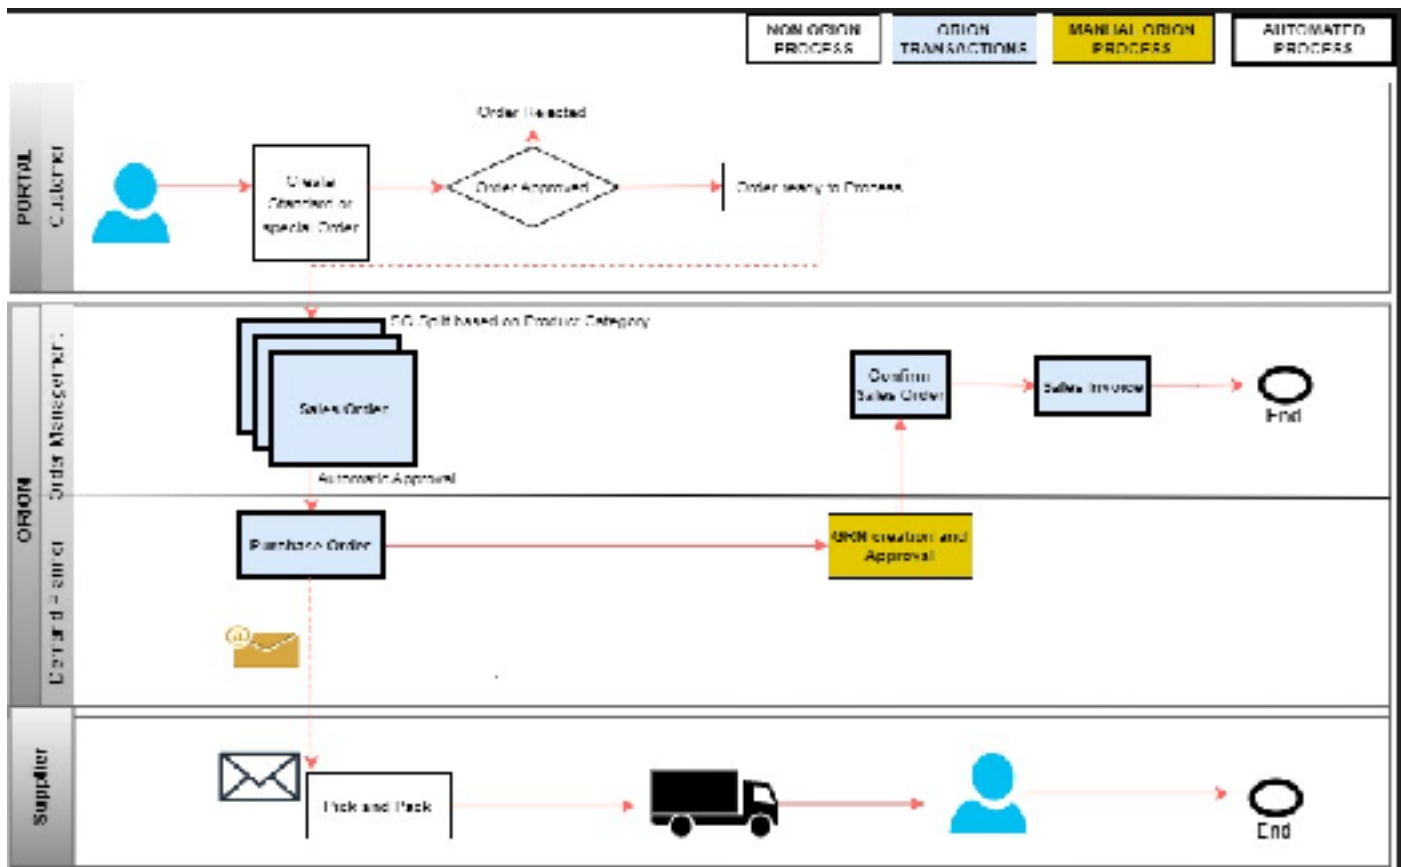

[https://canoneuropenv.sharepoint.com/teams/EMEA-DRONE/Shared%20Documents/40\\_Roll%20In/CCEE/Design%20office/BusOps/DocPrints/Details%20-%20e-mail%20copy%20-%20original.xlsx](https://canoneuropenv.sharepoint.com/teams/EMEA-DRONE/Shared%20Documents/40_Roll%20In/CCEE/Design%20office/BusOps/DocPrints/Details%20-%20e-mail%20copy%20-%20original.xlsx)

- Document prints for order confirmation and Invoice are available for the users to be printed. Original Invoice print can be printed only once. Second time onwards Invoice print will be printed as duplicate invoice copy.
- Incoterm and Incoterm year will be printed in Invoice document print. For tangible products Incoterm will be captured from Invoice transaction and Incoterm year will be captured from the customer master. For intangible products based on the shipment mode(E-Delivery) captured from the portal, Incoterm will be blank in document print and Ship to address will be displayed as "E-Delivery".

## 3.2. Orders Initiated thru Web Portal – Semi Automatic Flow

Semi-Automatic flow is applicable when CCEE places Orders to non-canon central application.

Broadcast, Colorado, Colorwave, NT ware, Therefore, Arizona, UV Inks (Only for Israel).

### 3.2.1.Sales Order

- Sales orders will follow the same process as in automatic process 3.1.1 for Sales.

### 3.2.2.Purchase Order

- Purchase orders will be created automatically with the default price as Zero.
- Once Purchase order is created in Orion, it will be automatically approved.
- Purchase order will be transmitted for further process by Business. PO to be sent offline / manual to supplier.
- For Semi-automatic flow there will not be EX100/EX420 interface to R12 or PEPLS. This is applicable only for the items with product BU types SWN, 3PP, BRC and OTH.
- Supplier will be selected based on the supplier code given in the item master (Local attributes)

- If supplier details for a combination of product type and location is not available, then Auto PO will not get generated. User can create PO manually for such cases.
- For Software (NT-ware & Therefore) Purchase is invoiced once per quarter per Debit note to Per partner per supplier there is a SO and a PO kept open. Every quarter (3 month) supplier download pulled into Excel to generate Debit note per partner per supplier.
- The SO & PO for software (subscriptions) has to stay open due to active contract - will be short closed when contract is ended.
- SO & PO software (license) goes 1:1 and will be closed

### 3.2.3. Goods Receipt / Goods Receipt Costing

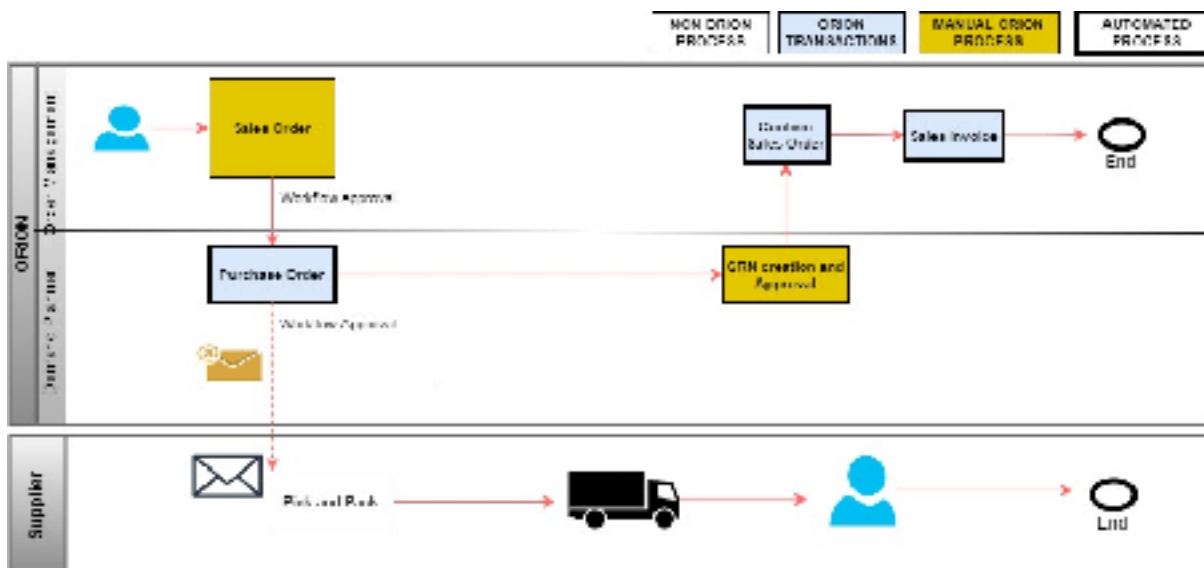

- Once shipment confirmation is received through e-mail or by other means from supplier, GRN can be created manually by referring to the Purchase orders / invoice received from supplier
- All pending order lines of Purchase orders will be displayed, and users can select the items that are to be received.
- Users will then enter the unit prices, Quantity for each of the item based on the prices and Quantities received in the supplier's invoice.
- Once GRN is approved, posting and confirmation will happen automatically.

### 3.2.4. Sales Invoice

- Sales invoice will get generated automatically based on approval of GRN.
- The process will remain the same as described in 3.1.4

## 3.3. Orders Initiated in Orion – Manual flow

Manual Automatic flow is applicable when CCEE places specific Orders to non canon suppliers, such as paper, 2<sup>nd</sup> hand (Giessen) and Samples, IT Equipment, tools some software.

### 3.3.1. Sales Order

- Orders are entered manually into Orion
- Sales order type will be selected based on the product category for which the order is generated.
- Prices for the products are to be entered manually. If prices are available part of price list, then those prices will be pulled, and users can change the prices if required.

- Payment term will be defaulted in Sales Order based on the Payment term in Customer Master.
- Shipment mode will be defaulted in Sales Order based on the Shipment mode (Road/Air/Sea etc) defined in Customer master.
- The incoterm also needs to be changed by the user depending on the business and flow different Incoterms will be applicable. Below are the list of Incoterms to be used.

| Incoterm Code    | Description                                                  | Mode of Shipment                  |
|------------------|--------------------------------------------------------------|-----------------------------------|
| CIP - CCEE       | CIP named place of destination as stated in delivery address | TRUCK & SEA SHIPMENTS             |
| CIP - CCEE - AIR | CIP International Airport of delivery country                | AIR SHIPMENTS                     |
| CIF - CCEE       | Cost Insurance and Freight (Port of delivery country)        | ex Navigator (PT) factory – PAPER |
| DAP - CCEE       | DAP named place of destination as stated in delivery address | ex paper factories – PAPER        |
| FCA              | Free Carrier (Place of Delivery)                             |                                   |

For Manual orders, incoterm can be chosen by the users manually.

For Semi-automatic orders, user can choose the right Incoterm when finalizing the GRN, so there will be right Incoterm on the invoice. (e.g. Broadcast CIP-AIR)

For automatic orders, Petra will setup a Matrix for the project team, which is linked to the shipment mode a country partner can choose in the Portal.

This Matrix we need then to link together with finance to the right taxcodes.

- Output VAT would be calculated from Onesource which is the 3<sup>rd</sup> party integrated system for Tax calculation. When the Sales Order is created in Orion it will be sent to Onesource and Onesource will return the Tax code and tax calculation value back to Orion.
- Once order is created in Orion, orders go through a workflow for approval
- No credit limit check is done during Order approval
- SO amendment is possible as final quantity can change and price

### 3.3.2.Purchase Order

- Purchase orders will get created automatically
- Once Purchase order is created in Orion, orders go through a workflow for approval.
- Workflow for approval can be setup by Canon CEE IT team.

### 3.3.3.Goods Receipt / Goods Receipt Costing

- Once shipment confirmation is received through e-mail or by other means from supplier, GRN can be created manually by referring to the Purchase orders
- All pending order lines of Purchase orders will be displayed, and users can select the items that are to be received.
- Purchase VAT will be automatically calculated from Onesource which is the 3<sup>rd</sup> party integrated system for Tax calculation. When the GRN is created in Orion it will be sent to Onesource and Onesource will return the Tax code and tax calculation value back to Orion.

- Users will then enter the unit prices for each of the items based on the prices received in the supplier's invoice. -> in the PO the purchase price has to be applied / with supplier invoice the purchase price has to be crosschecked
- Once GRN is approved, posting and confirmation will happen automatically.

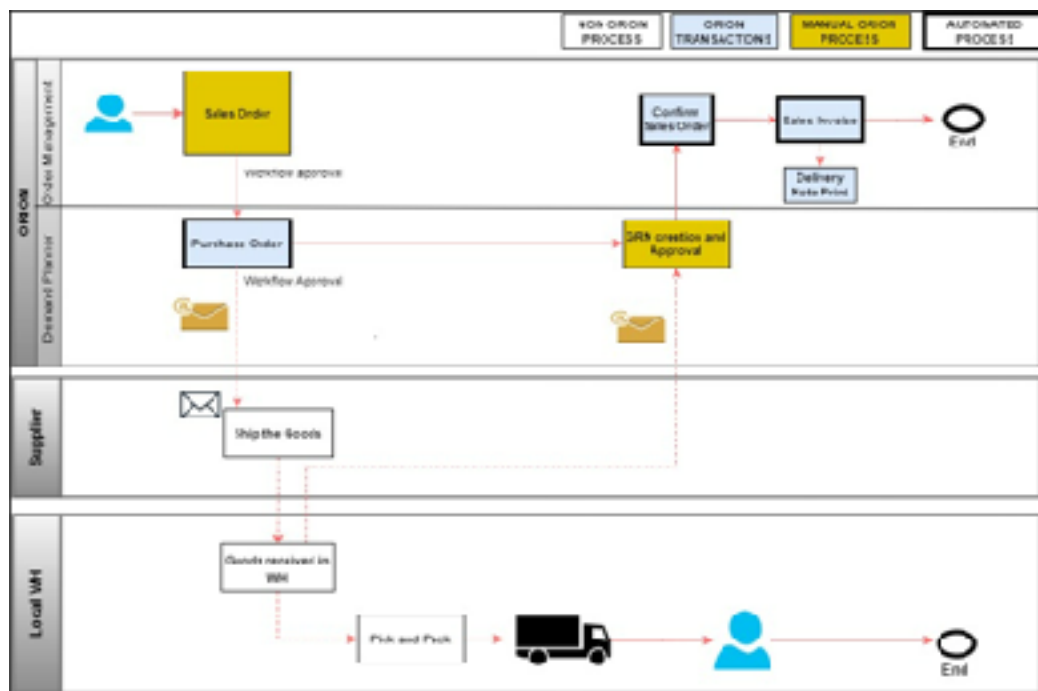

### 3.3.4.Sales Invoice

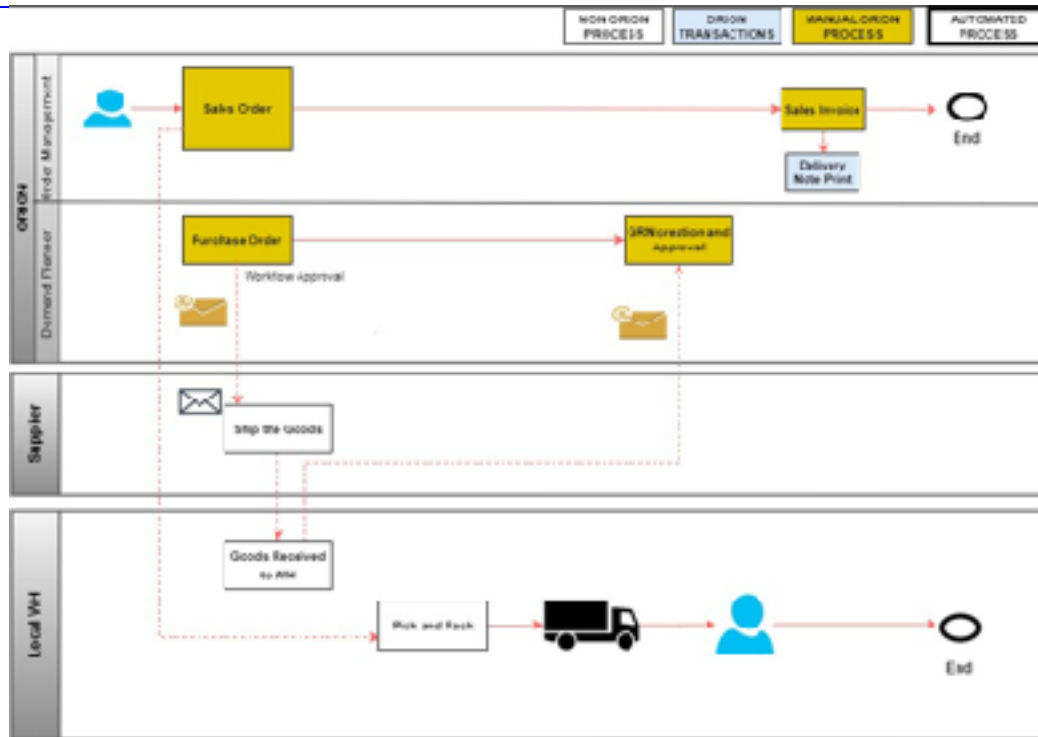

- Sales invoice will get generated automatically based on approval of GRN.
- The process will remain the same as described in 3.1.4

## 3.4. Orders Initiated in Orion – Local WH flow

Local WH flow will be used only in case CCEE purchase products to the local warehouse.

Please refer the section [5.14.3](#) for the WH location setup in Orion

### 3.4.1.Sales Order

- Sales Process will be same as 3.3.1

### 3.4.2.Purchase Order

- Purchase orders will get created automatically or manually.
- Once Purchase order is created in Orion, orders go through a workflow for approval.
- Workflow for approval can be setup by Canon CEE IT team.

### 3.4.3.Goods Receipt / Goods Receipt Costing

- Once shipment confirmation is received through e-mail or by other means from WH, GRN can be created manually by referring to the Purchase orders
- All pending order lines of Purchase orders will be displayed, and users can select the items that are to be received.
- Purchase VAT will be automatically calculated from Onesource which is the 3<sup>rd</sup> party integrated system for Tax calculation. When the GRN is created in Orion it will be sent to Onesource and Onesource will return the Tax code and tax calculation value back to Orion.
- Users will then enter the unit prices for each of the items based on the prices received in the supplier's invoice. -> in the PO the purchase price has to be applied / with supplier invoice the purchase price has to be crosschecked
- Once Goods receipt is created in Orion, orders go through a workflow for approval
- Once GRN is approved, posting and confirmation will happen automatically.

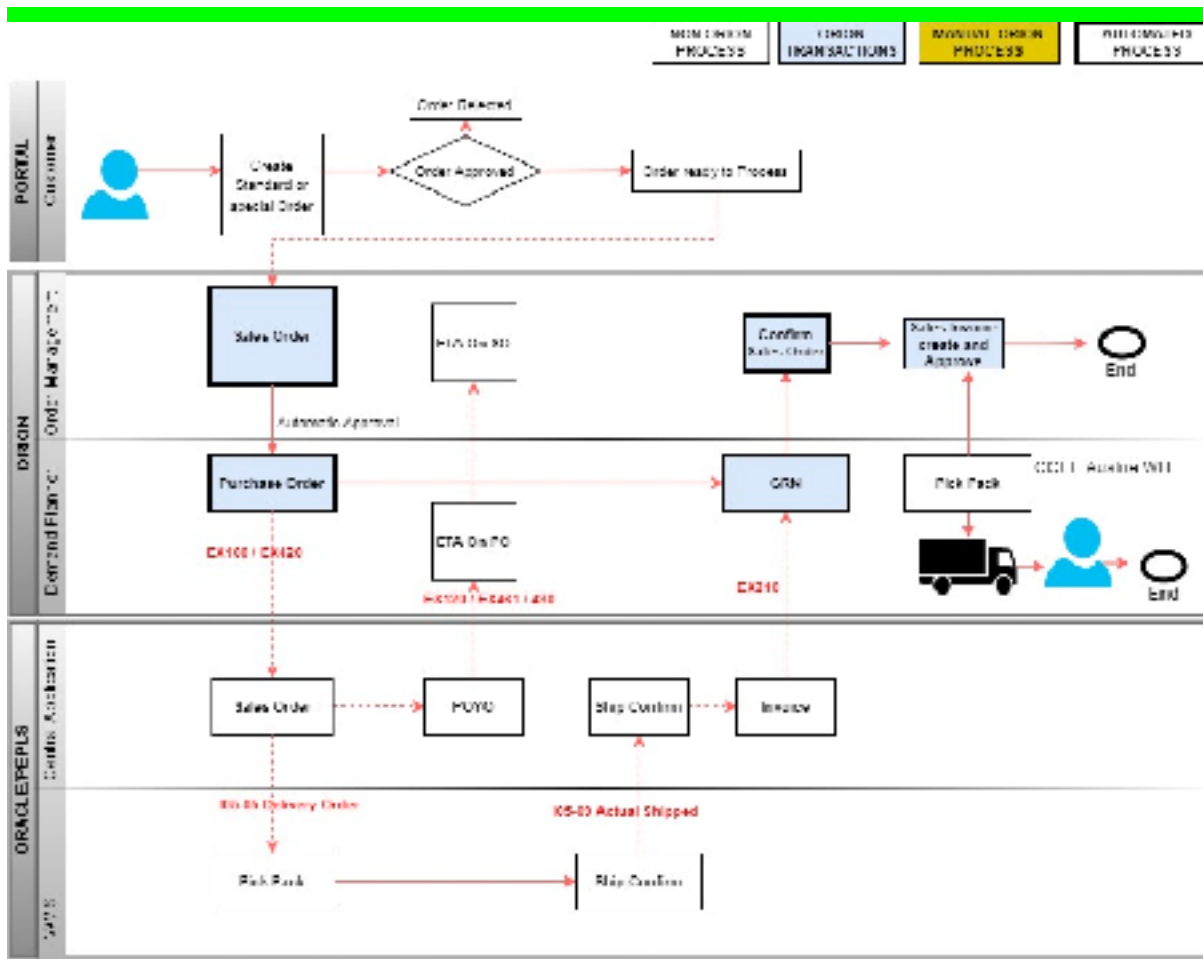

### 3.4.4.Sales Invoice

- Sales invoice will get generated automatically based on approval of GRN of PO is created from SO. Or Invoice has to be created by pulling SO manually
- The process will remain the same as described in 3.1.4

### 3.5. Broken Delivery Orders

Broken Delivery orders are orders which are not shipped to end-customers directly by suppliers, but need to make a 'stop-over' in Local CCEE warehouse.

In this case, the supplier ships the goods to Austrian warehouse of Canon CEE. The goods are then re-shipped to the end customer from Canon CEE as the source location. This is done due to statutory compliance of Country of origin for certain countries, due to the nature of goods (2<sup>nd</sup> Hand) and because of finance compliance processes.

#### 3.5.1. Broken delivery Order Process - Automatic

- Orders are placed through web order.
- Sales order will get created automatically in Orion and delivery location will be defaultd based on Product BU type.
- Purchase orders get created automatically and approved based on the Supplier and product BU Type mapping
- When Sales orders are generated, the Ship to Address will be the address mentioned in the portal. Bill to address will be taken from Address of Sales location of Sales order.
- PO will be created automatically and PO will be transmitted to Oracle with the ship to Customer address as the broken delivery address mentioned in the address master flex 13. The partners address is overruled by the field in ORION called "Broken Delivery Address" and this address will be sent to Oracle instead of the ship-to address from partner.

Book Order

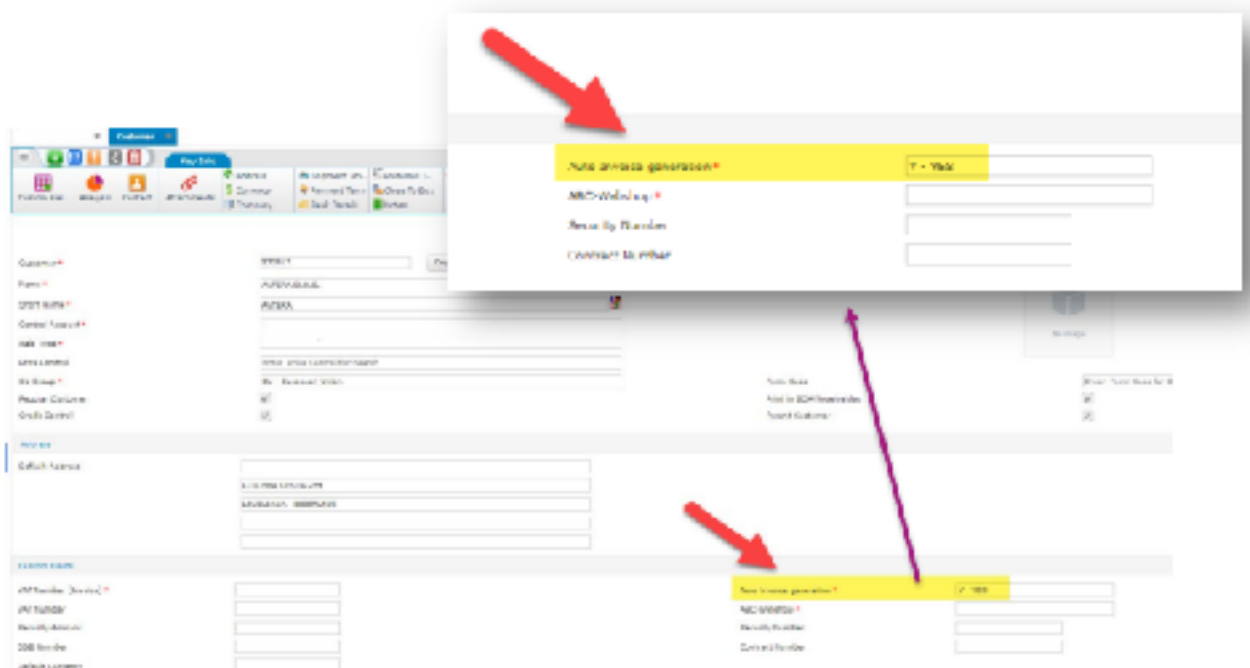

After the SO is in Oracle the team in CENV (?????) sends manually an order to Giessen, DE. They come back afterwards with the estimated dates when the goods are ready prepared and packed for ship-out and the ETA date in Vienna, DHL warehouse. CEE BusOps Specialist or Associate will pre-inform the DHL warehouse about the ETA date

- Once shipped from Giessen the CENV invoice will be generated (but this can also take some days) and sent from CENV (?????) to us manually via email. After that CEE will book the GRN manually into ORION based

on the CENV invoice. When the GRN is successfully approved BusOps informs FIN dept. accordingly with the GRN# and CEN inv. PDF. It depends on the setup of the partner if the CEE invoice will be generated automatically or not. Reservation is enabled for items, so that the items received in GRN are reserved against the SO, through the SO-PO-GRN link.

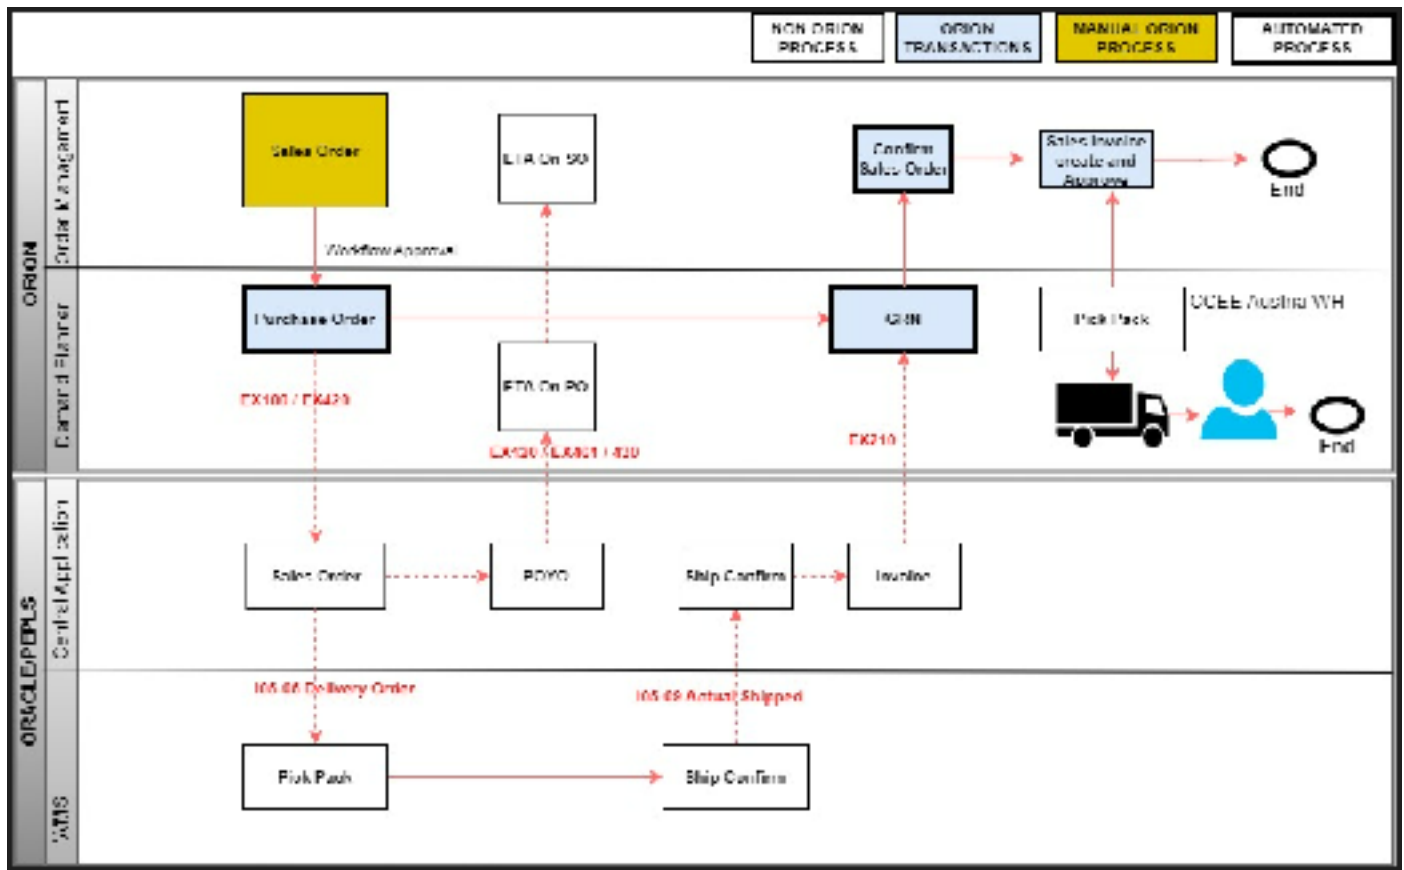

## Invoice generation

- Once the goods are received at Vienna Hub, goods get reserved against the sale order for the customer
- Invoice is NOT generated automatically. This is decided based on a flag in Customer master- whether to generate invoice automatically or not.

- When the actual shipping is done to the customer, Invoice is created manually by pulling all pending items from Sales order.
- Invoice is then approved through workflow process

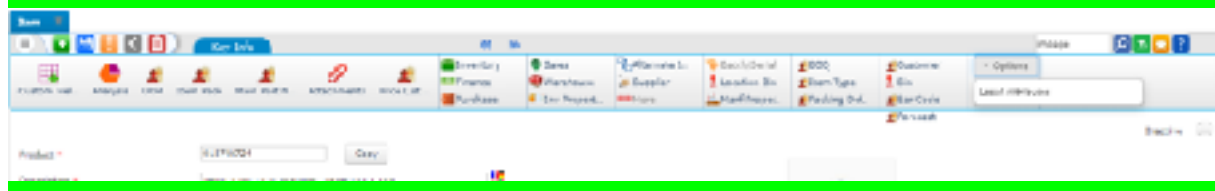

## Drone

- Sales Order will be manually created in Orion by Business user and approved with approval workflow.
- All the other processes remain same as Broken delivery Automation proces

### 3.6. MDM Process(Gap #15, 33, 106, 156, 168, 169)

- The Item master is used to define unique codes for an item and capture description and other details for that item. Item codes defined here are common across all companies for an installation.
- PDH Product master for Merchandize and PEPLS Spare parts Master is directly integrated to Orion, the data update from PDH is happening daily and update from PEPLS on weekly basis, (#15, #33))
- Define Base UOM and alternate UOMs for the items (Example UNITS, BOX, PALLET etc). UOM will be defined in UOM Master
- Item local attributes are enabled to enter the local (Country) specific details for the item. For example Purchase Price, Supplier

Local attributes table in Item master will be as per the below screenshot

|                                         |            |
|-----------------------------------------|------------|
| <input type="checkbox"/> Purchase Price | 120        |
| <input type="checkbox"/> Copyright      | 12/11/2011 |

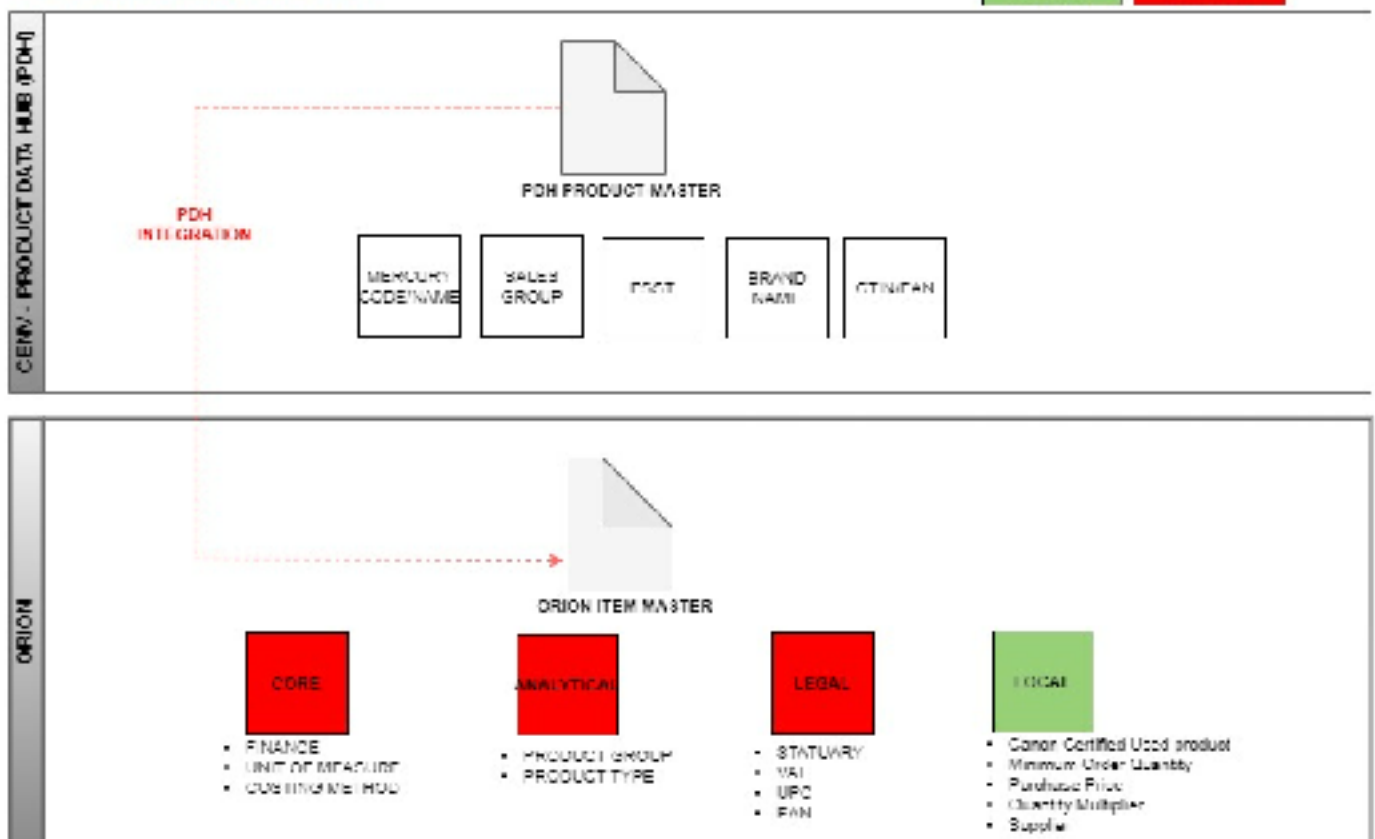

- The logistic informations will come from the 3PL as excel/csv file and will be uploaded to Orion thru the schedulers. Business will put the files received from Syncreon in Local Drive.
  - Product Table
  - COS Report
  - Outstanding Order report and
  - Hold report

The data from the above files will be loaded to Orion tables and will be used for Webshop Open order report.

- Dangerous goods – This will come from the SCM (Like in as is) and will be loaded in Portal
- WIFI Update: This will come from the Central PM (Like in as is) and will be loaded in Portal.
- (Gap #169) There is a possibility for local item set-up as it is used for Service charges (like Warranty Extension, freight charges), Technical equipment sending to CCEE subsidiaries (laptop, IT equipment) and/ or \* Marketing purposes (different compensations like Bonus, Kick-back, Promotion). In those cases items will be created with the help of Canon Central MDM team.
- (Gap #106) As mentioned PDH and PEPLS are the source for the item, comparison to be done with DRONE and CCEE item master and the missing items should be migrated before Go Live.

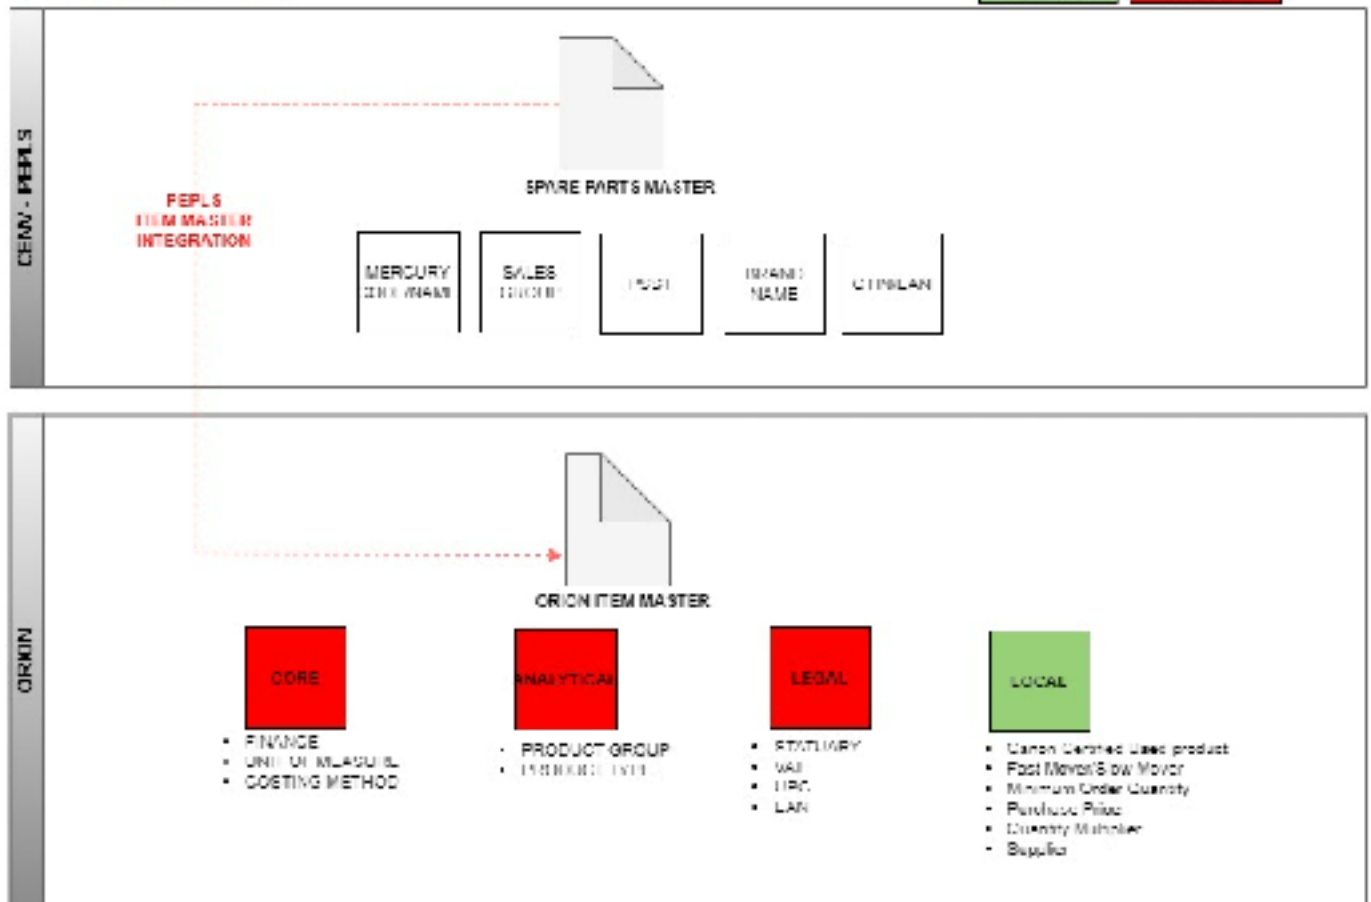

## ITEM MASTER - MERCHANDIZE

## ITEM MASTER - SPARES

USER MANAGED SYSTEM MANAGED

### 3.7. Common Process for all Sales Flows

#### 3.7.1. Proforma Invoice (Gap #51)

- Proforma invoice is based on a sales order.
- Proforma invoice is created for: 1. Prepayment (before actual invoice) & 2. One order is splitted over 2 vehicles (after actual invoice)
- Proforma Invoice will be created manually by uploading the Sales Order information in to Proforma invoice transaction.
- Proforma Invoice Key informations will have to be created manually and item details can be uploaded thru upload functionality.
- Proforma invoice is normally created before the actual invoice is generated, however can also be created after the actual invoice.
- Users can edit quantity, rate or add items as required
- Proforma invoice will have no Financial or stock impact
- If the proforma invoice has to be created for same sales Order again after it was created, sales Order details can be downloaded from the report and uploaded in new proforma invoice transaction.

## 3.7.2.Manual Purchase Order

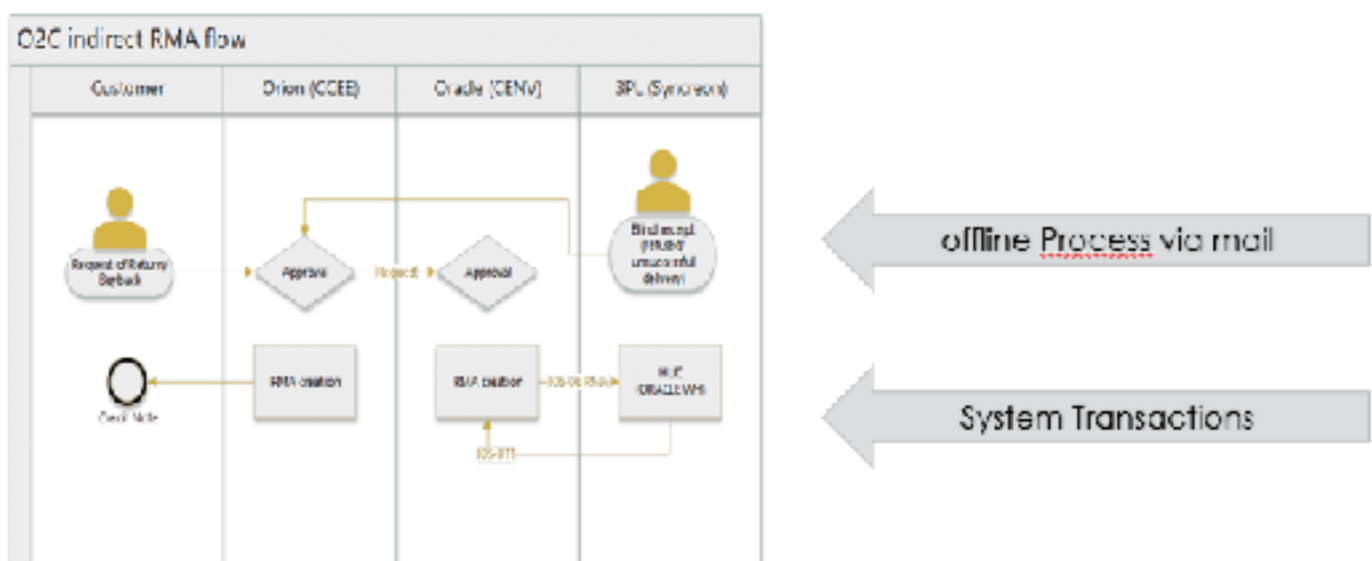

- Direct Purchase orders would be created for items purchased for internal use or for consumption (like office supplies). Direct purchase orders will also use the same Purchase order transaction code and series as that of Purchase order for Merchandise and software's.

See the below example of PO raised for internal use

The screenshot displays the 'Purchase Order' form in the Canon ERP system. The form is for a purchase order raised for internal use. It includes fields for Supplier, Address, Payment Term, Item, Document Number, Date, Currency, and Exchange Rate. A summary table on the right shows the total value and net value. Below the form is a table of items with columns for Item, Grade 1, Grade 2, UOM, Location, Price, Quantity, and Rate.

- Purchase of Assets will also be done through direct Purchase order, and will use the same Purchase order transaction code and series as that of Purchase order for Merchandise and softwares.

## 3.7.3.O2C Indirect RMA Flow

- There are cases items get returned if partner cannot accept the surplus delivery (mistake by the WH).
- Partner/Customer will request to CCEE by email that they want to return.

- CCEE will then request to CENV for approval.
- After the Goods are received in 3PL WH, CCEE will create Sales Return/Credit note transaction in Orion and Issue Credit note to customer.

### 3.7.4. Debit Notes

- Value only Debit notes (with no stock impact) can be done to suppliers and customers.
- Debit note can be done for Stock and Nonstock items.

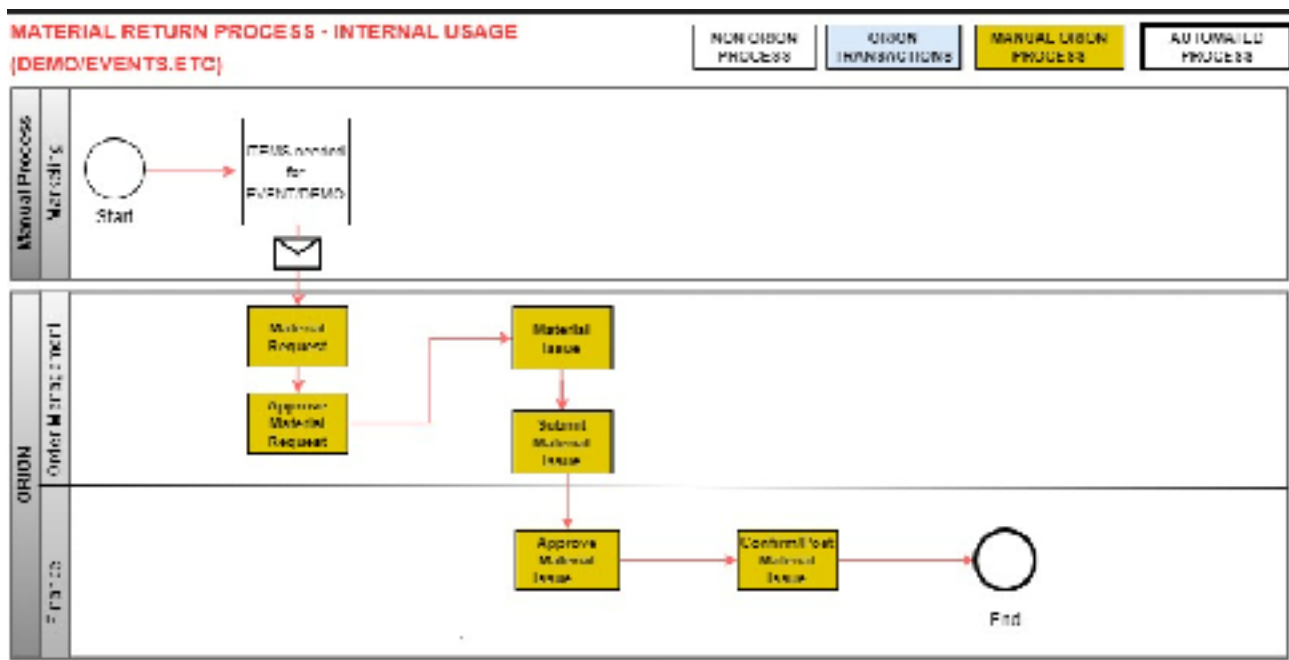

### 3.7.5. Material Issue Process

#### Material Request:

For items purchased for internal consumption (display items etc.,) a material request would be done to respective charge area based on consumption.

#### Material Issue:

Material Issue transaction will be done by OM team and Finance team will approve the transaction.

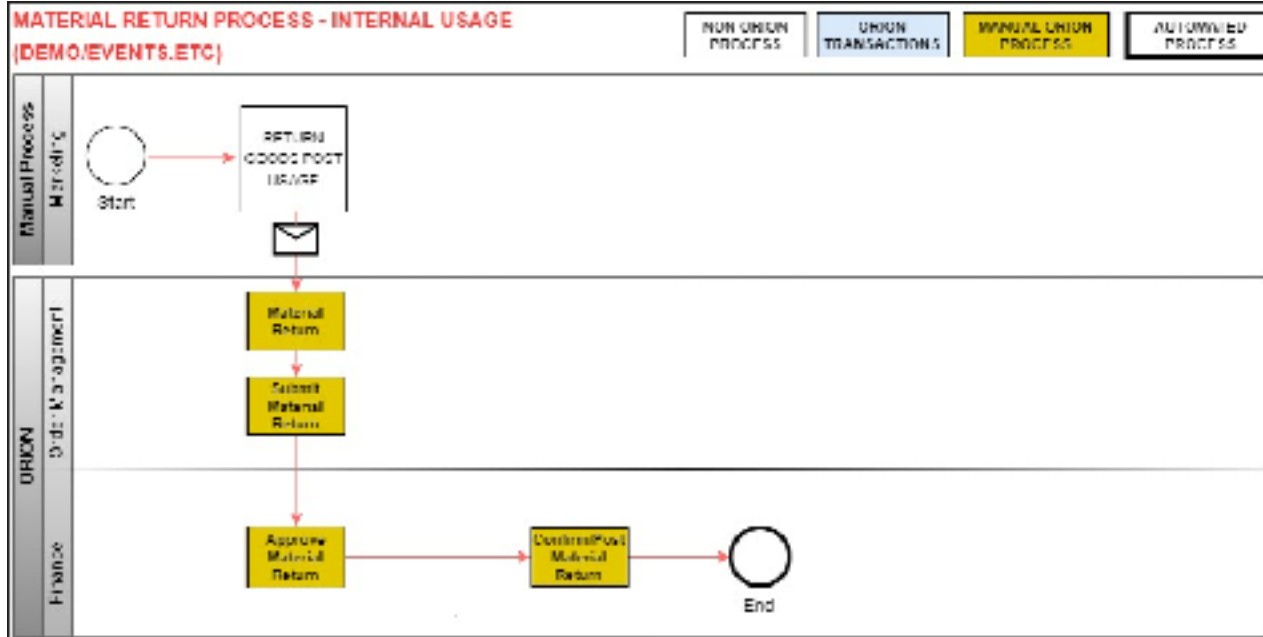

### 3.7.6. Material Return

Material Return is an optional transaction and is always referred from Material Issue Transaction

In case of any Material requires to be returned, this Transaction shall be used.

Stock Confirmation and Financial Entry Generation happens once the Document is approved. Stock Confirmation shall increase the Inventory with the Current value.

## 4. Interface description (Detail description Will be covered in Interface document)

### 4.1. Portal Interface

- Web Portal Orders placed in Portal will be interfaced to Orion. Will be described in detail in Interface design document.

### 4.2. EX100/EX420 Interface

- Purchase order transmission to Oracle will be done by EX100 interface and PEPLS via EX420 Interface. Refer the below link for detailed interface solution

[https://canoneuropenv.sharepoint.com/:w:/r/teams/EMEA-DRONE/\\_layouts/15/Doc.aspx?sourcedoc=%7B307DB3C1-5B9F-47B7-94AB-66C8FBB85DB4%7D&file=RA024%20-%20EX%23%23%23%20DRONE%20ETUDE%20Interface%20.docx&action=default&mobileredirect=true](https://canoneuropenv.sharepoint.com/:w:/r/teams/EMEA-DRONE/_layouts/15/Doc.aspx?sourcedoc=%7B307DB3C1-5B9F-47B7-94AB-66C8FBB85DB4%7D&file=RA024%20-%20EX%23%23%23%20DRONE%20ETUDE%20Interface%20.docx&action=default&mobileredirect=true)

### 4.3. EX210 Interface

- GRN creation will be handled via EX210 Interface. Will be described in detail in Interface design document.

### 4.4. EX120 Interface

- EX120 is the POYO interface from Oracle R12 which will update the specific fields in Purchase Orders and Sales Orders. Please refer the [Section 5.9\(POYO\)](#) process for more details.

### 4.5. EX461 Interface

- EX461 is the POYO interface from PEPLS which will update the specific fields in Purchase Orders and sales Orders. Please refer the [Section 5.9\(POYO\)](#) process for more details.

### 4.6. Onesource

- VAT Codes will be setup in Orion and VAT calculation logic will be applied from the interface with **Onesource** which is the 3<sup>rd</sup> party integrated system for Tax calculation. When the SO/GRN is created in Orion it will be sent to Onesource and Onesource will return the Tax code and tax calculation value back to Orion.

## 5. Functional Design

### 5.1. Transaction Codes

- Only one set of transaction codes are to be created for the entire Business operations flow, irrespective of Automatic/ Semi-Automatic / Buy sell process

| Transaction        | Existing CCEE Transaction code | To Be(DRONE) Transaction Code |
|--------------------|--------------------------------|-------------------------------|
| Sales order        | SO-CEE                         | I-SO                          |
| Proforma Invoice   | PRF-CEE                        | PRF                           |
| Purchase order     | PO-CEE                         | PO                            |
| Goods Receipt Note | GR-CEE                         | GR                            |
| Invoice            | INV-CEE                        | I-CE-IN                       |
| Debit Note         | DN-CEE                         | I-CE-DN                       |
| Credit Note        | CN-CEE                         | I-CE-CN, I-CE-SR              |
| Material Request   | NA                             | MRE                           |
| Material Issue     | MI-CEE                         | MIS                           |
| Material Return    | NA                             | MRT                           |

### 5.2. Validations (Gap#47, 54, 79)

- GAP 47 – Third Party Orders are getting split from Portal based on the split logic in the section below 5.4 In Sales Order Screen external validation is there to be enabled to Check whether the item entered has the Unique Supplier. This is used to trigger automatic PO creation after the Sales Order is automatically approved. Supplier code to be captured in Item local attributes so that user will have the upload option to upload the supplier code to item master.
- Gap 54 - In SO, Product Type (Sales Type) and the Location combination validation should be enabled. Valid combination setup should be defined as per the DRONE template. Please refer the below combination for Sales Type and Location

| Product Type | Description                 | Location |
|--------------|-----------------------------|----------|
| 3PP          | 3rd party product           | NL201    |
| B2B          | Merchandise                 | HU101    |
| B2B          | Merchandise                 | WH101    |
| B2C          | Merchandise                 | HU101    |
| B2C          | Merchandise                 | WH101    |
| BRC          | Broadcasting                | NL201    |
| DRF          | Drums Fast mover            | HU102    |
| DRS          | Drums Slow mover            | NL102    |
| PPR          | Paper                       | NL201    |
| SPF          | Spares Fast mover           | HU102    |
| SPS          | Spares Slow mover           | NL102    |
| SWC          | Software / License Canon    | SW101    |
| SWN          | Software /License Non Canon | SW201    |

|     |                             |       |
|-----|-----------------------------|-------|
| USP | Used Products               | WH114 |
| 3PP | 3rd party product           | WH101 |
| 3PP | 3rd party product           | OF101 |
| B2B | Merchandise                 | OF101 |
| B2C | Merchandise                 | OF101 |
| BRC | Broadcasting                | WH101 |
| BRC | Broadcasting                | OF101 |
| DRF | Drums Fast mover            | WH101 |
| DRF | Drums Fast mover            | OF101 |
| DRS | Drums Slow mover            | WH101 |
| DRS | Drums Slow mover            | OF101 |
| PPR | Paper                       | WH101 |
| PPR | Paper                       | OF101 |
| SPF | Spares Fast mover           | WH101 |
| SPF | Spares Fast mover           | OF101 |
| SPS | Spares Slow mover           | WH101 |
| SPS | Spares Slow mover           | OF101 |
| SWC | Software / License Canon    | WH101 |
| SWC | Software / License Canon    | OF101 |
| SWN | Software /License Non Canon | WH101 |
| SWN | Software /License Non Canon | OF101 |

- Gap 79 - SO to PO to GRN to Invoice – Sales Order reference will be captured in Purchase Order and PO reference will be captured in GRN and GRN reference will be captured in Invoice. [Refer section 5.4](#) for Delivery location combination logic

### 5.3. Transaction Uploads (Gap #1)

Below transactions should have upload in Orion via Excel

- SO (sales order)
- PO (purchase order)
- Proforma invoices
- Debit Notes
- Credit Notes
- RMA's (returns)

Below is the Sales Order screen where the upload option to be enabled as per DRONE template

- 20AC -> B2C
- 20AM -> B2B
- 20DU -> BRC

| Product Type | CCEE Existing | DRONE |
|--------------|---------------|-------|
| B2B          | 3D_CENV       | HU101 |
| B2C          | 3D_CENV       | HU101 |
| BRC          | 3D_BRC        | NL201 |

|     |            |       |
|-----|------------|-------|
| 3PP | 3D_NON_OR  | NL201 |
| DRF | 3D_CENV    | HU102 |
| DRS | 3D_CENV    | NL102 |
| PPR | 3D_NON_OR  | NL201 |
| SPF | 3D_CENV    | HU102 |
| SPS | 3D_CENV    | NL102 |
| SWC | LIC_OR     | SW101 |
| SWN | LIC_NON_OR | SW201 |
| OTH | NA         | NL201 |
| USP | AT_VIE_WH  | WH114 |

Expenses/Freight cost will be split in Portal itself and sent to Orion at every line item. Expense will be applied in Portal only for the product types B2B, B2C, DRF, SPF, BRC, 3PP, PPR and SWN(Only tangible).

Example 1: If there is a split Order which has the combination of SPF, SPS, DRS, DRF, expense will be split and applied only to SPF and DRF orders.

Example 2: If there is a split Order which has the combination of B2B, SWC, SWN(Intangible) expense will be applied only to B2B order and will split across the line items based on value.

## 5.5. Purchase Order Supplier mapping Logic

After the sales Order is approved in Orion, Automatic purchase Orders will get created in Orion. Supplier in the purchase order is chosen based on the Destination country and Product type from Sales Order. Below table shows the supplier pick logic for PO.

Note: The supplier code below are the existing supplier codes from CCEE, the codes will get changed when these are migrated to Orion.

| Destination Country | Product Code | Supplier Code | Supplier Name             |
|---------------------|--------------|---------------|---------------------------|
| EU                  | B2B          | S001011       | CANON EUROPA TRI BIG/ SPF |
| AT                  | B2B          | S001011       | CANON EUROPA TRI BIG/ SPF |
| NE                  | B2B          | S001011       | CANON EUROPA TRI BIG/ SPF |
| AT                  | B2C          | S001011       | CANON EUROPA TRI BIG/ SPF |
| EU                  | B2C          | S001011       | CANON EUROPA TRI BIG/ SPF |
| NE                  | B2C          | S001011       | CANON EUROPA TRI BIG/ SPF |
| NE                  | BRC          | S001010       | CANON EUROPA TRI SPS      |
| AT                  | BRC          | S001010       | CANON EUROPA TRI SPS      |
| EU                  | BRC          | S001010       | CANON EUROPA TRI SPS      |
| EU                  | DRF          | S001011       | CANON EUROPA TRI BIG/ SPF |

|    |     |         |                          |
|----|-----|---------|--------------------------|
| NE | DRF | S001011 | CANON EUROPA TRI BIG/SPF |
| AT | DRF | S001011 | CANON EUROPA TRI BIG/SPF |
| EU | DRS | S001010 | CANON EUROPA TRI SPS     |
| NE | DRS | S001010 | CANON EUROPA TRI SPS     |
| AT | DRS | S001010 | CANON EUROPA TRI SPS     |
| NE | SPF | S001011 | CANON EUROPA TRI BIG/SPF |
| AT | SPF | S001011 | CANON EUROPA TRI BIG/SPF |
| EU | SPF | S001011 | CANON EUROPA TRI BIG/SPF |
| NE | SPS | S001010 | CANON EUROPA TRI SPS     |
| AT | SPS | S001010 | CANON EUROPA TRI SPS     |
| EU | SPS | S001010 | CANON EUROPA TRI SPS     |
| NE | SWC | S001010 | CANON EUROPA TRI SPS     |
| AT | SWC | S001010 | CANON EUROPA TRI SPS     |
| EU | SWC | S001010 | CANON EUROPA TRI SPS     |
| EU | USP | S001009 | CANON EUROPA AT BIG      |
| NE | USP | S001009 | CANON EUROPA AT BIG      |
| AT | USP | S001009 | CANON EUROPA AT BIG      |

## 5.6. Price list Types (Gap #143)

Price lists are uploaded by Business in Web Portal and will be maintained in Orion by Webportal integration. Below are the 3 types of Price lists followed by CCEE

### 5.6.1.General Price List:

General Price list will have list of items with Price defined for each item specif to certain period. When the pricelist expires or price changes user will upload in Webportal with new price list. When user is placing order in Webportal price will be automatically picked from the pricelist maintained in Orion. Below is the screenshot how General pricelist maintained in Orion.

The screenshot displays the Orion system's 'General Price List' configuration page. The top section contains various input fields for setting up the price list, including 'Price List Name', 'Description', 'Currency', 'Price List Type', and 'Exchange Rate'. Below these fields is a table titled 'Item Details' which lists items with columns for 'Item', 'Price', and 'Status'. The table shows several items with their respective prices and statuses.

## 5.6.2.Inclusive Price List:

Inclusive Price list is for B2C Orders where a price for a box / palette or a truck is the threshold of the next price slab which will be applicable to all QTys. In Orion we will be having different Unit of Measurement for Pack/Palette/Truck

| UOM CODE | DESCRIPTION | UNIT DESCRIPTION | UNIT  |
|----------|-------------|------------------|-------|
| PC10     | Box 10      | Box 10           | Box   |
| PC20     | Box 20      | Box 20           | Box   |
| TRUCK    | Truck       | Truck            | Truck |

We have the base UOM as UNIT, if you see the below screenshot conversion factor from Pack to Base UOM Units is 10. In the screenshot below UNITS conversion to PC10 is 0.1. From portal when the item XXXXX with UOM PC10 is uploaded, conversion factor to UNIT as 0.1 should be considered.

| UOM          | Conversion Factor |
|--------------|-------------------|
| UNIT - UNIT  | 1                 |
| UNIT - PC10  | 0.1               |
| UNIT - PC20  | 0.1               |
| UNIT - TRUCK | 1                 |

Price will be uploaded in Portal with different price for each UOM, Once the orders are placed in Portal it should get converted to base UOM UNITS when coming in to Orion and appropriately the items quantity also will have to be inserted. This calculation logic should happen in Portal.

## 5.6.3.Exclusive Price List:

Exclusive price list if for B2B where slabs needs to be defined for item quantities so that the right price will be picked based on the quantity slab.

Example : 1 to 10 Qty Price is 1000 EUR, 11 to 999999 Qty Price is 900 EUR

If the customer Orders the Qty up to 10 then the price will be 1000 EUR and If the customer orders more than 10 then the price will be 900 EUR.

In Orion we have to define the different UOMs for different slabs, same as Inclusive.

Price will be uploaded in Portal with different price for each UOM, Once the orders are placed in Portal it should get converted to base UOM UNITS when coming in to Orion and appropriately the items quantity also will have to be inserted. This calculation logic should happen in Portal.

All the UOMs will be created and setup in Orion UOM master. When the item with different UOM uploaded from portal, item master UOM section should get updated with new UOM.

| UOM           | Max. Qty | Conversion factor | Net Weight | Gross Weight | Volume | Inactive |
|---------------|----------|-------------------|------------|--------------|--------|----------|
| PC10 - Box 10 | 10       | 10.0              | 10.0       | 10.0         | 10.0   | No       |
| UNIT - UNIT   | 1        | 1.0               | 1.0        | 1.0          | 1.0    | No       |

Pricing Master report in Orion should be enhanced to include the UOM also as below

| Pricing Master Report      |                        |          |                |                  |           |        |
|----------------------------|------------------------|----------|----------------|------------------|-----------|--------|
| AMW1 - Canon CEE GmbH      |                        |          |                |                  |           |        |
| User: SYSTEM               |                        |          |                |                  |           |        |
| Run Date: 23/05/2023 08:30 |                        |          |                |                  |           |        |
| Report ID: 80001422        |                        |          |                |                  |           |        |

## 5.8. Automailers

### Purchase Order - Non Canon suppliers

Purchase Order details will be sent on the approval of PO to the contacts with the email flag selected in supplier master. This is only for Non canon suppliers.

### Invoice (Gap #28, #29, #316, #317)

On approval of Invoice

In case of Non EU customers & defined EU Customers, original invoice should be sent to Warehouse through email, but will be printed, signed and 22stamped onsite to be sent along with delivery.  
For all other customers the original invoice/copy invoice is automatically sent to them via email. (This should be able to be selected)

Customer will get a COPY of invoice by email (with COPY mentioned in the document print)

**NOTE:** Mail setup should be done in Orion and managed by the local MDM team. **Reference 3.1.4**

## 5.8.1. GRN Booking Failed on approval (Gap #121)

On approval of GRN, if it is failed, automated email to be sent to:

[cee.businessoperations@canon.at](mailto:cee.businessoperations@canon.at)

Anton Schroeer: [anton.schroeer@canon.at](mailto:anton.schroeer@canon.at)

Michael Schmidt: [michael.schmidt@canon.at](mailto:michael.schmidt@canon.at)

Example screenshot below:

## 5.9. POYO Process (Gap #5, 16, 17, 19, 26, 170, 171)

- CENV provides POYO information for each Purchase Order (PO) sent to them in form of EX100 (Merch) and EX420 (Spares). This information comes in form of Flat files known as EX120 for Merch and EX461 for Spares parts.
- These files are imported into Orion system and updates the PO Line Items and PO Line Delivery schedules
- When a PO is referenced from a Sales Order (SO) then the SO will also get updated based on the PO with One-to-One Line Item Reference.
- POYO process in Orion will perform following operations on a PO and SO
  - Item Code Change (Short-Close and Insert New Item Code)
  - Quantities Split
  - Both Item Code change and quantities splits for the same line item
  - Update PO Line Items Expected & Actual Delivery Dates as per POYO dates
  - Update SO Line Items Schedule Delivery Dates based on pre-defined Matrix of <Shipment Method + Destination Country> combination lead days.

### With POYO Process in DRONE:

- PO Line Item Expected Delivery date will be update based on POYO Dates, and consequently SO Line Item level Schedule delivery date will be updated based on pre-defined Matrix
- If there is split of Quantities for the same line item, then POYO processing will short close the original line item and will enter new Lines in PO based on the split quantities
  - Same operation will be performed on SO Lines i.e. Short closed Original line item and enter new lines for the Item Code
- If an Item Code of a PO is changed and alternate item code is shipped from CENV, then POYO process will short-closed the Original Line Item in PO.
- New Item code will be entered into PO with the Quantities as per the POYO data.
- On Original/Old Line Item, system will update New Item Code on Item flex field with New Code
- PO Line Expected delivery dates will be updated
- Similarly on referenced SO, original item code will be short-closed.
- New line item code will be entered into SO with quantities as per PO new line
- On Original/ Old line item of SO, it will be updated with new Item Code into one Flex field at item level
- SO Line item level Schedule Delivery dates will be updated based on pre-defined Matrix
- Sales Invoice will be created based on new Item Code and old item code will be updated on Invoice Item Level flex field

- When Sales Invoice for this SO will be generated, the document print of the invoice will refer the Original/Old Item Code from Flex field as "Article No" and New Item Code will be mentioned as suffix "Shipped Item" under "Description" label on same line level on Invoice, an example of it is shown as below:

| Article No                                                                                                                          | Description                                                                             | Quantity(UOM) | VAT     | Unit Price        | Total(EUR) |
|-------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------|---------------|---------|-------------------|------------|

|                                                                                                                                     |                                                                                         |               |         | VAT 0%            | 0,00       |
|                                                                                                                                     |                                                                                         |               |         | To Be Paid (EUR)  | 1.361,25   |

Gap #171 WebPortal will refer to the Orion Sales Order and get the details from POYO (ETA, Order reference) from Orion through portal Orion integration. This data is used for web portal Open Order report.

## 5.10. Document Prints

All the documents prints template from existing CCEE should be converted to Jasper template and apply in DRONE template. There will not be any change in the document format and data logic with current CCEE.

### 5.10.1.Sales Order

Sales Order Document print can be viewed only on approval of the sales Order. Refer the below link for Sales Order template

[https://canoneuropenv.sharepoint.com/teams/EMEA-DRONE/Shared%20Documents/40\\_Roll%20In/CCEE/Design%20office/BusOps/DocPrints/SO-CEE.pdf](https://canoneuropenv.sharepoint.com/teams/EMEA-DRONE/Shared%20Documents/40_Roll%20In/CCEE/Design%20office/BusOps/DocPrints/SO-CEE.pdf)

### 5.10.2.Invoice (Gap #8, #114)

Invoice Document print can be viewed only on the approval of the invoice. Refer the below link for Invoice template.

Preview Option before the approval of invoice will be provided in Document Print with separate name (Preview Invoice) so that user can preview the invoice print before it is being sent to the customer. This option is applicable only for manually created invoice (Gap #114)

[https://canoneuropenv.sharepoint.com/teams/EMEA-DRONE/Shared%20Documents/40\\_Roll%20In/CCEE/Design%20office/BusOps/DocPrints/INV-CEE.pdf](https://canoneuropenv.sharepoint.com/teams/EMEA-DRONE/Shared%20Documents/40_Roll%20In/CCEE/Design%20office/BusOps/DocPrints/INV-CEE.pdf)

(Gap #8) Additional field to be enabled in customer master to capture "Incoterm 2010" or "Incoterm 2020" which will be added in Invoice document print.

## INVOICE

### 5.11.18. Sales Order Pending for Invoice (Gap #18)

Pending Sales Order report in DRONE template should be modified with “Oracle Order reference” column newly added to it. Check the report in SharePoint link below

[https://canoneuropenv.sharepoint.com/:x/r/teams/EMEA-DRONE/\\_layouts/15/Doc.aspx?sourcedoc=%7B6BDDF204-06B6-4915-820F-863CE7636E5F%7D&file=SalesOrderPendingforInvoice.xlsx&action=default&mobileredirect=true](https://canoneuropenv.sharepoint.com/:x/r/teams/EMEA-DRONE/_layouts/15/Doc.aspx?sourcedoc=%7B6BDDF204-06B6-4915-820F-863CE7636E5F%7D&file=SalesOrderPendingforInvoice.xlsx&action=default&mobileredirect=true)

### 5.11.19. Spare parts Master Upload to web shop (Gap #173)

Web Portal is integrated to Orion and spare parts will be referred from Orion thru the interface, so no upload is necessary to web portal.

### 121Item Master Upload to web shop (SYS90STM) (Gap #135)

Web Portal is integrated to Orion and Item master will be referred from Orion thru the interface, so no upload is necessary to web portal.

## 5.12. Orion Schedulers (Gap #43)

Below are the Orion schedulers and their frequency which has to be lifted from CCEE and apply in DRONE template specific to CCEE company

| ID    | CODE                 | Description                                                     | Active YN | Daily/Weekly/Monthly | Scheduler Time |
|-------|----------------------|-----------------------------------------------------------------|-----------|----------------------|----------------|

## 5.13. Menus

Menu structure in Orion will be as Below. For Business Operations Main menu will be Business Operations and Sub menus are highlighted below in blue. For every sub menu there will be Transactions/masters/reports menu which is in Green. Menus will be assigned per user role based on segregation of duties.

From Today As is only change in the transaction codes for Invoice, Debit Note, Credit Note, Purchase Order, GRN.

## 5.14. Common Masters

### 5.14.1. Customer Master (Gap #105)

- Each customer will be assigned an unique customer code in the system.
- Auto code generation for customer code is enabled so for any new customer is getting created, it will be the next number of last created customer

- Multiple currencies may be attached to customers (e.g in future if some customers have transactions in Roubles)
- Every customer will have the relevant billing and shipping address attached
- Multiple billing and shipping address can be created and attached for the same customer in customer master
- Contracts and other documents related to the customer can be attached in customer master
- Multiple contacts with address, mobile and email address can be created for each customer
- Specific defined email address in the contacts will be used for sending automatic email to customers
- General information such as Shipment mode, payment terms etc would be specified for the customers. One customer can have multiple shipment mode / payment terms depending on Item / supplier
- Every Customer Code will be attached with a Control Account Code (Open Entry) and once the Control accounts are attached, the Customer Codes are created as Sub Accounts in the General Ledger
- Customer Analysis Code

| Analysis code | Analysis Name     |
|---------------|-------------------|
| • 1           | • Vertical        |
| • 2           | • Direct/Indirect |

- (Gap #112) Quick customer creation option will be provided using a pre-set template capturing minimal fields. Subsequently the other details application to the customer master will be updated by users from respective departments. User has to Open the existing customer and click on copy button as shown below. After clicking on Copy all the details from this customer will get copied to the new customer, user has to provide only the customer code.

Form Code: £ - SA

Parent Customer: ☒

## 5.14.2. Supplier Master

- Each Supplier will be assigned an unique customer code in the system.
- Auto code generation for supplier code is enabled so for any new supplier is getting created, it will be the next number of last created customer

Customer

Supplier

1. Supplier Info, 2. Payment Term, 3. Address, 4. Company, 5. Currency

Supplier: 0000041

Short Name: KEXX

Control Account: Enter control account for Supplier

Name: LAXAR

Regular Supplier: ☒

Print in Qty/Reservations: ☒

- Multiple Currencies can be attached to a Supplier. The Base Currency of the company and default Company will be attached to supplier automatically.
- Multiple address codes will be attached to a Supplier. Default Address code will be identified which will be defaulted on all the transactions
- Contact details like (person name, telephone, mobile number) will be captured against each address code
- Multiple Payment terms will be used to capture for a Supplier. Option to select one payment term code as default code for transactions.
- The usual mode of shipment from every supplier will also be attached.
- Every Supplier Code will be attached with a Control Account Code (Open Entry) and once the Control accounts are attached, the Supplier Codes are created as Sub Accounts in the General Ledger
- Every new Supplier code created it can be approved by Finance as a workflow.
- Custom fields will be used to display any other additional information for supplier.
- Automatic mails to the suppliers will be triggered from the system as per the Email id attached for supplier.
- Document attachments to the master will be available to attach multiple documents
- Supplier Bank Details also will be captured in this master
- Supplier VAT number will be stored in Flex Field 01 of customer master, and is a mandatory field.

### 5.14.3.Location Master (Gap #320)

- All locations are defined in the Location Code Master
- Each Location can be classified into Document Source, Stock and Sales
- Document Source Location is just for reference indicating the system that Document got generated from the respective Location
- Locations which are selected as Stock Location will have stock maintained
- Sales takes place from the Locations which are selected as Sales Locations
- Each Location will get associated with a Stocking Group, Costing Group & Closing Group
- Locations created in Orion will be as below

| CCEE As is |                  | DRONE<br>Location Mapping |
|------------|------------------|---------------------------|
| Location   | Name             | Location                  |
| 3D_BRC     | 3D BROADCAST     | NL201                     |
| 3D_CENV    | 3D CENV          | HU101, HU102              |
| 3D_NON_OR  | 3D NON ORACLE    | NL201                     |
| AT_VIE_OFF | VIENNA OFFICE    | OF101                     |
| AT_VIE_WH  | VIENNA WAREHOUSE | WH114, WH101              |
| LIC_NON_OR | LICENSE          | SW201                     |
| LIC_OR     | LICENSE ORACLE   | SW101                     |

### Inventory Locations (Gap #320)

Below are the inventory locations needed to CCEE without any integration to 3PL

- A- stock (B2B, B2C, BRC, Venlo, Poing) – WH101 location code can be used for this
- A- stock spares (Canon & Océ) – WH102 location code can be used for this
- 2<sup>nd</sup> hand (Giessen) – WH114 location code can be used for this
- Office (samples, IT equipment, spares) – OF101 location code can be used for this

### 5.14.4.Address Master

- Each Customer / Supplier will have its address attached in the Address Master
- The address template can be created as per country wise and will be called in the address master.
- The address created in the Address Master is global. It can be attached in Supplier & customer master.
- The respective address code will be attached with the respective supplier and will be defaulted in the transaction.
- Address can also be captured in other languages if required.
- Flex 13 will have the ship to address for customers involved in Broken delivery process.

## 5.15. User Roles

User roles will be defined based on the Segration of Duties which will be explained in SOD document (Doc Ref to be included later)

## 6. Security

<description of security requirements>

The following is a list of potential subjects. It is very unlikely that all of these will be relevant in any particular case: these are suggestions for the analysts to further explore.

- Encryption requirements.
- Authentication requirements.
- Authorisation requirements.
- Levels of access.

## 7. Compliance aspects

Performance testing should be performed in DRONE template to validate the system performance after the CCEE company addition to the template. Load testing will be done by Azentio Engineering team and results will be validated by Canon Infra team.(Gap #20)

## 8. Testing

Test cases will come from Business and Business will sign off the test scenarios.

## 9. Issues and Risks

| Issue/Risk | Description | Owner | Prio | Date |
|------------|-------------|-------|------|------|
|            |             |       |      |      |
|            |             |       |      |      |
|            |             |       |      |      |

10. Open and Closed Issues

10.1. Open Issues

| ID | Issue | Resolution | Responsibility | Target Date | Impact Date |
|----|-------|------------|----------------|-------------|-------------|
|    |       |            |                |             |             |
|    |       |            |                |             |             |

10.2. Closed Issues

| ID | Issue | Resolution | Responsibility | Target Date | Impact Date |
|----|-------|------------|----------------|-------------|-------------|
|    |       |            |                |             |             |
|    |       |            |                |             |             |
